DETAILED ACTION

EXAMINER'S AMENDMENT

- 1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
- 2. Authorization for this examiner's amendment was given in a telephone interview with Jeffrey J. Chapp on 02/28/2007.
- 3. The application has been amended as follows:
 - Claim 6 has been amended as follows:
- 6. The method of claim 1, further comprising receiving said header portion at a second transceiver that is located remotely from said first transceiver.
 - Claim 13 has been amended as follows:
- 13. A method for operating a wireless local area network (WLAN), comprising:

 providing a first WLAN transceiver with advanced signal processing capabilities;

 providing a second WLAN transceiver with advanced signal processing

 capabilities, wherein a maximum interframe period between data and an

acknowledgement is required for compatibility, and wherein a duration of said interframe

Application/Control Number: 10/080,454

Art Unit: 2616

period is shorter than a duration that is required to perform said advanced signal processing mode;

transmitting a header and data using [[a]] said first WLAN transceiver;
specifying a first data field in said header that enables indicates said advanced signal processing mode; and

specifying a second data field in said header that defines a data time period and an extension time period, wherein said extension time period is associated with dummy data transmission.

- Claim 27 has been amended as follows:
- 27. A method for providing advanced signal processing in a wireless local area network that requires an interframe period between data and an acknowledgement for compatibility, wherein a duration of said interframe period is shorter than a duration that is required to perform said advanced signal processing, comprising: transmitting a header using a first transceiver;

specifying a first data field in said header that indicates an advanced signal processing mode; and

specifying a second data field in said header that defines a data time period and an extension time period, which provides additional processing time for said advanced signal processing mode, wherein said extension time period is associated with dummy data transmission.

Application/Control Number: 10/080,454

Art Unit: 2616

Claim 30 has been amended as follows:

30. A method for operating a wireless local area network (WLAN), comprising: providing a WLAN transceiver with advanced signal processing capabilities, wherein a maximum interframe period between data and an acknowledgement is required for compatibility, and wherein a duration of said interframe period is shorter than a duration that is required to perform said advanced signal processing mode; and

receiving a header and data via said WLAN transceiver;

wherein said header specifies a first data field, which indicates said advanced signal processing mode, and specifies a second data field, which defines a data time period and an extension time period, wherein said extension time period is associated with dummy data transmission.

Allowable Subject Matter

4. Claims 1 - 4, 6 - 30 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art of record, in single or in combination, fails to disclose explicitly the limitation of specifying a second data field in said header that defines a data time period and an extension time period, wherein said extension time period is associated with dummy data transmission as disclosed in claim 1; specifying a second data field in said header that defines a data time period and an extension time period, wherein said extension time period is associated with dummy data transmission as disclosed in claim

13; specifying a second data field in said header that defines a data time period and an extension time period, which provides additional processing time for said advanced signal processing mode, wherein said extension time period is associated with dummy data transmission as disclosed in claim 27; wherein said header specifies a first data field, which indicates said advanced signal processing mode, and specifies a second data field, which defines a data time period and an extension time period, wherein said extension time period is associated with dummy data transmission as disclosed in claim 30.

Additionally, all of the further imitations in claims 2-4, 6-12, 14-26, 28-29 are allowable since the claims are dependent upon the independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Andrew C. Lee whose telephone number is (571) 272-3131. The examiner can normally be reached on Monday through Friday from 8:30am - 5:00pm.

Art Unit: 2616

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wing Chan can be reached on (571) 272-7493. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
